Description: A perennial succulent up to 1m tall with opposite or whorled fleshy oblong-lanceolate leaves up to 20cm long. Leaves are green above and blotched with purple underneath. Leaf edges produce spoon-shaped bulbs which bear plantlets. The plant may also form lateral roots above the ground surface. Has umbrella-shaped terminal inflorescence of small bell-shaped pink flowers.

Habitat: Can grow dense thickets in dry and arid environments from roadsides to forest understories.

Florida Introduction Date: Earliest Florida herbarium specimen from 1934

Control Methods: Mechanical: Hand pull. Follow-up hand removal of leaves is necessary to prevent leaves from producing new plants. [IFAS, control for *K. pinnata*].

Chemical: Foliar (5% glyphosate). [IFAS, treatment for *K. pinnata*].
