TAMPA VERVAIN

Glandularia tampensis (Nash) Small **Synonyms:** Verbena tampensis Nash **Family:** Verbenaceae (vervain)

FNAI Ranks: G2/S2

Legal Status: US-none; FL-Endangered

Billy B. Boothe

Field Description: Perennial **herb** with 4-sided, sprawling **stems** to 0.6 m long. **Leaves** 3.8 - 6.4 cm long, margins coarsely toothed although sometimes entire below the middle; leaf tips broadly pointed; upper leaf surface dark green, lower surface pale green; base of leaf narrowing to form wings on the **leaf stalk**; leaf stalk 1.3 - 2.5 cm long. **Flower** blue-purple, 5-lobed, tube and each lobe approximately 1.3 cm long. **Calyx** with straight, stiff hairs but **no glands**; calyx lobes with bristly tips. Four pitted nutlets approximately 4 mm long comprise the fruit.

Similar Species: Five Glandularia species occur in Florida with three species that are native (two of which are listed as endangered), and two are listed as non-native species (Wunderlin et al. 2017). Glandularia tampensis differs in having leaves that are incised to simply divided, and sepals that have no glands, bristle tips and long hairs (Chafin 2000)

Related Rare Species: Coastal vervain (*Glandularia maritima*), state-endangered, resembles Tampa vervain; its flowers are lavender with an orange throat; leaves are more succulent and irregularly lobed and toothed, and have shorter leafstalks; its calyx has stalked glands and pointed but not bristle-tipped lobes. It occurs primarily on the SE FL coast.

Habitat: Openings in moist hammocks, live oak-cabbage palm hammocks, pine-palmetto flatwoods and in disturbed, sandy areas.

Best Survey Season: Flowers primarily in the spring and intermittently all year.

Range-wide Distribution: Endemic to Florida. On the west coast, extends from Levy south to Lee County and on the east coast, from Volusia to Indian River County.

Conservation Status: Tampa vervain has been seen in only one conservation area in the last 20 years; its habitat has been severely reduced by development and silviculture.

Protection and Management: Protect coastal habitats from development. Use occasional ground fire in mesic and xeric hammocks and frequent fire in flatwoods. Monitor for and hand pull exotic species posing a threat to plants. Avoid utilizing heavy equipment (mowers, vehicles, ATV's, etc.) along road edge where tampa vervain is known to occur.
